

Business 2 Bern · by Stregoni

FOR THE BERN ECONOMIC DEVELOPMENT AGENCY · HACK APERTUS

From the user's words to a sourced Bern brief.

Research & Expertise Navigator.

THE PROBLEM

Expertise is scattered. And the words don't match.

A company says "glucose sensor". Websites say:

01	02	03	04
continuous glucose monitoring	CGM	biosensing	wearable sensing

Hundreds of pages across UniBE, ARTORG and the Diabetes Center Berne.

WHAT IT DOES

Plain words in. Sourced brief out.

01
Company need

02
Bern experts found

03
Every source checked

04
Advisor reviews → PDF & PowerPoint

Nothing leaves without a human.

DEMO · HELIOSENSE

A Swiss medtech wants a wearable that measures blood sugar continuously.

HelioSense is fictional. The Bern facts come from real public pages.
Recorded from our app in demo mode.

INSIDE THE BACKEND

Apertus understands. Code checks. People decide.

Understand

Apertus reads the need in plain words and plans the searches.

Retrieve

Full-text and meaning search, merged and reranked. Optional web research.

Check, then draft

Every claim checked against its exact passage. Evidence frozen, then drafted for review.

PostgreSQL keeps the evidence and the case history. Interrupted work resumes.

TRUST & ACCURACY

If it's not in a source, it's not in the brief.

Category	Subcategory	Subject	Source
Diseases · MeSH C	Endocrine diseases · C19	Diabetes mellitus, type 1	The exact passage

Matched by meaning

Two official MeSH levels, then the subject. Several labels or "unknown" allowed.

Missing is missing

"Not stated in sources" instead of a guess. No invented people or roles.

Human gate

No export until every card is reviewed.

SCALE

Medical today.
Any field tomorrow.

Now	Next	Next	Next
Medtech ✓	ICT	Energy	Materials & precision

New field

A new settings file and its sources. One engine, no new code.

New website

One entry in the source list.

More data

Built in the background. Old briefs stay valid.

The engine knows documents and facts, not diabetes. Cost and quality at scale are measured in the pilot.

ON SITE

Files that must not leave the building.

Stays inside

Held-back files never have to leave the building.

Local option

Local Apertus and search, packaged assets, web tools off.

Before rollout

Confirm the law, legal basis, retention and user rights.

Offline mode is configured, not yet validated on your hardware. Local hosting alone does not make it GDPR-compliant.

NEXT

The desk can change hands.

Today

One advisor reviews every case before anything is sent.

The same job

A colleague takes her cases for leave, or when the role changes.

Not in this build

Handover is the next step. This demo is one person.

The review stays human.

NEXT

Let's run a pilot.

01
Real cases

02
Right experts in the top 10

03
On-site deploy

04
